EXECUTIVE SUMMARY

Enterprise AI executive who moves AI from experimentation to measured business value inside defense security and compliance requirements. Built an enterprise AI platform, the governance around it and the agentic tools that run on it. Ready to take an enterprise from generative AI to agentic and multi-agent operations.

- **Agentic AI:** Stood up Astrion's enterprise AI platform from nothing to full seat uptake in one quarter and proved savings above its full annual cost. Built a defense intelligence agent and an executive command center for the CEO.
- **Regulated environments:** Lead the Executive AI Governance Board with Cyber and IT, with the AI Use Policy in place before first use. Supervise matrixed data teams on Databricks, Microsoft Fabric and data lakes in Azure GCC High. Bringing secure frontier models to IL4 with a government sponsor and a path to IL6.
- **Scale:** Directed 700+ people on an $896M Navy contract, authored or architected $1B+ in winning proposals, and negotiated labor agreements covering 300+ employees across 20+ years of defense leadership.
- **Talent:** Hired and managed hundreds of engineers and technical staff. Apply doctoral research on engineer turnover to recruiting and keeping technical talent. Promoted from Director to Senior Vice President in under two years.

CORE CAPABILITIES

AI strategy and value: Agentic AI | Enterprise AI platforms | AI value measurement and ROI | Use-case portfolio | Agentic AI coding | ModelOps

Regulated AI and data: AI governance | Azure GCC High | IL4 to IL6 | Hybrid on-prem to cloud data | Databricks | Fabric | Synapse | Data lakes

Leadership and growth: Executive and customer buy-in | Talent acquisition and retention | Matrixed teams | Labor relations | Capture strategy

SELECTED AI INITIATIVES

shAIne Enterprise AI Platform (Secure Hybrid AI Network Environment)

Problem: Astrion had no enterprise AI capability and needed one that met defense security requirements. **Solution:** Launched shAIne on Astrion's internal Azure GCC High environment with governance in place from the first month (reuse controls, output quality and explainability standards). Built a value model that multiplies attributed hours by loaded labor rate, by role, so AI return is auditable. **Outcome:** Full seat uptake within one quarter at about 77% weekly use. Savings from the first three instrumented users alone exceeded the platform's full annual cost by 40%. In the platform's first week, agentic AI coding delivered a program's status reporting tool and avoided about 310 hours of development.

AI Intel Brief Agent (defense, AI and contract intelligence)

Problem: Leadership needed one current read on AI, Department of War, Counter-UAS and contract news spread across dozens of sources. **Solution:** Built an agent that monitors 39 federal, defense and AI sources through the day, scores each item for business relevance and explains why. It tracks 15 themes, including Department of War contracts, Counter-UAS, AI policy and a recompete radar. **Outcome:** One relevance-ranked feed with a daily snapshot, weekly brief and searchable archive.

Enterprise Intelligence Command Center (agentic AI)

Problem: Executives waited days, and sometimes weeks, on manual reports for financial and pipeline answers. **Solution:** Built an AI Assistant that lets the CEO and executive leaders direct agents to generate reports and forecast financials and pipeline needs, with alerts on team-defined issues and risks in integration. It runs on a hybrid on-premises and Azure data foundation (Data Factory, medallion data lake, Synapse, row-level security, Entra ID). **Outcome:** Goes live December 4, 2026, replacing days- and weeks-long manual reporting with on-demand answers.

PROFESSIONAL EXPERIENCE

ASTRION — 2024 – Present

Senior Vice President, Solutions & Artificial Intelligence — Jun 2026 – Present

Layered Defense, Autonomous Warfare & Integrated Fires Division. Promoted from Vice President. Lead enterprise AI across all six company mission areas.

- Lead the Executive AI Governance Board. Developed the AI Use Policy before AI use was allowed, and review employee AI requests and AI product development needs with Cyber and IT.
- Supervise matrixed data teams working in Databricks, Microsoft Fabric and data lakes on Azure GCC High.
- Secured CEO buy-in to pilot frontier models and to migrate Atlassian across on-premises and cloud environments. The migration is in execution.
- Set the data, analytics and ModelOps approach for Counter-UAS, integrated fires and autonomous systems.
- In progress: an Ask Sage pilot at IL4 with a government sponsor and a path to IL6, a Talent Acquisition Agent with LinkedIn and marketing communications consultants, and a Counter-UAS range in Muscle Shoals, Alabama, with partners.

Vice President, Multi-Domain Test & Evaluation Oct 2024 – Jun 2026

- Built and led the AI Tiger Team, whose custom AI tools cut proposal development cycle times across the enterprise.
- Ran Astrion's AI adoption campaign as AI Campaign Lead: one-on-one sessions with staff and leaders, then an executive AI strategy session that won executive sponsorship.
- Owned division growth strategy across air, land, sea, space and cyber, with direct responsibility for expanding revenue.
- Redesigned CrewFlex from a legacy scheduling tool into an automated asset government evaluators rated a proposal Strength.
- Received the 2025 ASTRYS Award for Strategic Excellence in Innovative Solutions, Astrion's highest company honor.

Director, Program Management Aug 2024 – Oct 2024

Turned capture wins into executable portfolios with schedule and cost governance. Promoted to Vice President in two months.

HII MISSION TECHNOLOGIES 2020 – 2024

Program Manager, EWTPS System Modernization Jan 2024 – Aug 2024

- Owned modernization of Navy electronic warfare threat presentation systems from proposal through execution across CONUS and OCONUS ranges. Delivered on budget and on schedule with outstanding QASP scores.

Live & Virtual Range Solutions SME (concurrent) Jan 2023 – Aug 2024

- Authored the winning technical proposal for the U.S. Army's $379M Live Training, Ranges, and Combat Training Centers (LTRaC) IDIQ.
- Architected the Navy live and virtual training solutions behind $1B+ in wins across NCTE, NITE and CTTR. Wrote winning RFP and FEDSIM responses for Army, Air Force, Navy and Marine Corps teams.

Lead Engineer, Directed Energy Systems Integration Lab (concurrent) Oct 2022 – Aug 2024

- Stood up the lab's operations center and data systems at Point Mugu, enabling the first directed energy weapon tests on the Pacific range.

Associate Principal Project Engineer, Navy Continuous Training Environment Sep 2021 – Jan 2023

- Recruited and built a dispersed engineering workforce from scratch that delivered 35 projects ahead of schedule and under budget. Cut project overhead 18% and raised portfolio efficiency 22% year over year across six range sites.

Program Manager / West Coast Director, Navy Integrated Training Environment Sep 2020 – Sep 2021

- Directed 700+ personnel on an $896M Navy contract. Added two range sites to the contract while cutting operating costs.

URS, AN AECOM COMPANY, AND AMENTUM 2015 – 2020

Operations Manager / Contract Site Manager, Navy Combined Tactical Training Ranges

- Ran operations at three air stations with 123 staff across IT and cyber, quality, safety, security, logistics and operations.
- Negotiated labor agreements covering 300+ represented employees on CTTR and NITE, on terms favorable to the company.
- Held a three-year zero-incident safety record (90,773+ hours), the longest in program history.

NORTHROP GRUMMAN 2011 – 2014

Engineering Manager, Navy Combined Tactical Training Ranges

Held the same role on this Navy program with Aerotek (2010 – 2011) and URS (2014 – 2015).

- Managed 110 engineering projects from 2010 to 2015 in threat systems, radar, EW, RF, telemetry and range IT.

EARLY CAREER 2007 – 2010

SIPRNet Administrator, Epsilon, Inc. (2009 – 2010): ran classified networks and devices to cybersecurity compliance.
Engineering Technician, BAE Systems (2007 – 2009): supported live-fire testing of XM1203 NLOS-C prototypes.

EDUCATION, CREDENTIALS AND SERVICE

Doctor of Business Administration, Management, with Distinction | National University | 2024
Doctoral research: work-related stressors and turnover intentions among defense project engineers.

M.S., Management Information Security | Lewis University | 2015

B.S., Software Engineering | University of Phoenix | 2009

Clearance and service: Active Top Secret clearance | United States Marine Corps veteran

Certifications: Certified Wireless Security Professional (CWSP) | AccessData Certified Examiner (ACE)

Affiliations: IEEE | AUSA | NDIA | ITEA | PMI
